DETAILED ACTION

Response to Amendment

1. In the amendment filed on 12/1/2009, claims 1, 37, and 71 have been amended. The currently pending claims considered below are Claims 1-99.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The prior arts of record He et al. (US Patent 7,269,729 B2), Newman et al. (US Patent 7,266,699 B2), and Lei et al. (US Publication 2004/0255133 A1) teach analogous art to the instant application, that of data encryption utilizing encryption keys. He more specifically teaches providing unique encryption keys in a security catalog to encrypt column data in a database table. Newman more specifically teaches encrypting columns and tables in a database with symmetrical encryption keys. Lei more specifically teaches encrypting columns of a database through a parse tree. However, after careful consideration of the Response (pages 18-21) filed 12/10/2009 and the telephone interview held on 12/4/2009, the applicant extensively and specifically pointed out how the claims overcome the prior art of record, particularly the prior art of He teaching internally encrypting column and table data with encryption keys stored in a security dictionary, but does not disclose dynamic key management utilizing SQL statements. The prior art of He does not specifically teach defining Structured Query Language (SQL) extensions for creating and managing column encryption keys, to be utilized in SQL statements to specify creation of syntactically unique named encryption keys, as

disclosed in independent claim 1 of the instant application. Additionally, He does not specifically teach supporting the use of Structured Query Language (SQL) extensions for creating and managing column encryption keys, utilized in SQL statements to specify the creation of syntactically unique named encryption keys and the creation of database tables containing encrypted column data based on the named encryption key, as disclosed in independent claims 37 and 71 of the instant application. Thus in the instant application, SQL statements can specify the creation of syntactically unique named encryption keys and the creation of database tables containing encrypted column data based on the named encryption keys, through the use of defined SQL extensions to manage column encryption keys.

The feature of creating a unique named column encryption key through SQL statements is indicated in independent claim 1, wherein the claim teaches “receiving a first SQL statement that uses said SQL extensions to specify creation of a named encryption key for encrypting column data, said named encryption key being identified in said first SQL statement by a user-assigned syntactically unique name; parsing the first SQL statement, including creating said named encryption key with a the user-assigned syntactically unique name which can be parsed from within other SQL statements employing said SQL extensions;”. The feature of creating a particular named encryption key having a user-assigned syntactically unique name in response to parsing an SQL statement is indicated in independent claims 37, wherein the claim teaches “creates in response to parsing a first SQL statement employing said SQL extensions a particular named encryption key having a user-assigned syntactically unique name that can be

Art Unit: 2168

parsed from within other SQL statements employing said SQL extensions, said particular named encryption key being identified in said first SQL statement by said user-assigned syntactically unique name”, and similarly in independent claim 71. Consequently, independent claims 1, 37 and 71 and dependent claims 2-36, 38-70 and 72-99 are allowable over prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
